

Design Document: Rent & Ride

Project Summary

Rent & Ride is a web-based dashboard that allows users to browse, rent, and buy cars quickly and efficiently. This product matters because it simplifies the process of finding reliable transportation options and helps users make informed decisions with ease.

Problem Statement

Many users struggle to find affordable, reliable, and easy-to-access car rental or purchase options, especially when comparing prices and availability. Rent & Ride solves this by centralizing all options in one easy-to-use dashboard.

Use Case

The primary users are people who need temporary access to a vehicle. They will use this product to browse available cars, compare prices, and complete a rental or purchase request through a simple online interface.

Goals and Objectives

1. Provide a clean and user-friendly dashboard for browsing rental and sales cars.
2. Allow users to rent or purchase a car with minimal steps.

Key Features and Functions

1. **Car Catalog:** A list of available cars with photos, prices, and details.
2. **Rent Buttons:** Users can rent a car directly from the dashboard.
3. **Confirmation System:** Displays rental confirmation once the user selects a car.

Tech Stack and Tools

- **Frontend:** HTML, CSS, JavaScript
- **Design Tools:** Figma
- **Version Control:** GitHub

Algorithm (High-Level)

1. Display a list of cars when the page loads.
2. Allow the user to select a car.
3. If "Rent" is clicked, show rental confirmation.
4. Allow the user to return to the catalog.

Flowchart

Timeline

- **Month 1:** Build UI layout and car catalog.
- **Month 2:** Add Rent/Buy functionality and confirmation system.
- **Month 3:** Test, debug, finalize, and prepare for presentation.

Risk Mitigation

Risk: Users may experience slow loading times if many car images are used.

Mitigation: Optimize images and use lazy loading.

Evaluation Criteria

1. The dashboard loads all cars smoothly.
2. The Rent buttons work correctly.
3. The user can navigate the interface easily without confusion.

Future Considerations

- **Maintenance Need:** Regularly update car catalog with new vehicle data.
- **Future Feature:** Add user login accounts to save favorite cars and track rentals/purchases.
